

Set TX-Power 30

Three easy steps:

Here it goes

```
root@kali:~# ifconfig wlan1 down
root@kali:~# iw reg set BO
root@kali:~# iwconfig wlan1 txpower 30
```

This is what it looks before

```
wlan1 IEEE 802.11bg ESSID: off/any
Mode:Managed Access Point: Not-Associated Tx-Power=20 dBm
Retry long limit:7 RTS thr: off Fragment thr: off
Encryption key: off
Power Management: off
```

This is what it looks after

```
after :
wlan1 IEEE 802.11bg ESSID: off/any
Mode:Managed Access Point: Not-Associated Tx-Power=30 dBm
Retry long limit:7 RTS thr: off Fragment thr: off
Encryption key: off
Power Management: off
```

mine is `wlan1` as internal is wlan0 yours may well be `wlan0` so just swap `wlan1` for `wlan0` in your own setup.
