

Aircrack vs. WPA2

Install Aircrack

```
sudo apt-get install aircrack-ng
```

Search for Wlan Adapters

```
sudo airmon-ng
```

```
sbolinger@kali: ~  
File Edit View Search Terminal Help  
sbolinger@kali:~$ airmon-ng  
Run it as root  
sbolinger@kali:~$ sudo airmon-ng  
[sudo] password for sbolinger:  
  
PHY      Interface      Driver      Chipset  
phy0     wlan0          mt7601u     Ralink Technology, Corp. MT7601U  
sbolinger@kali:~$
```

The screenshot shows a terminal window titled 'sbolinger@kali: ~'. The user has run the command 'airmon-ng'. The output shows a table of available wireless interfaces. The 'wlan0' interface is highlighted with a green box. The table has four columns: PHY, Interface, Driver, and Chipset. The row for 'wlan0' shows it is connected to phy0, uses the mt7601u driver, and is a Ralink Technology, Corp. MT7601U chipset. The terminal also shows the user's prompt and the command history.

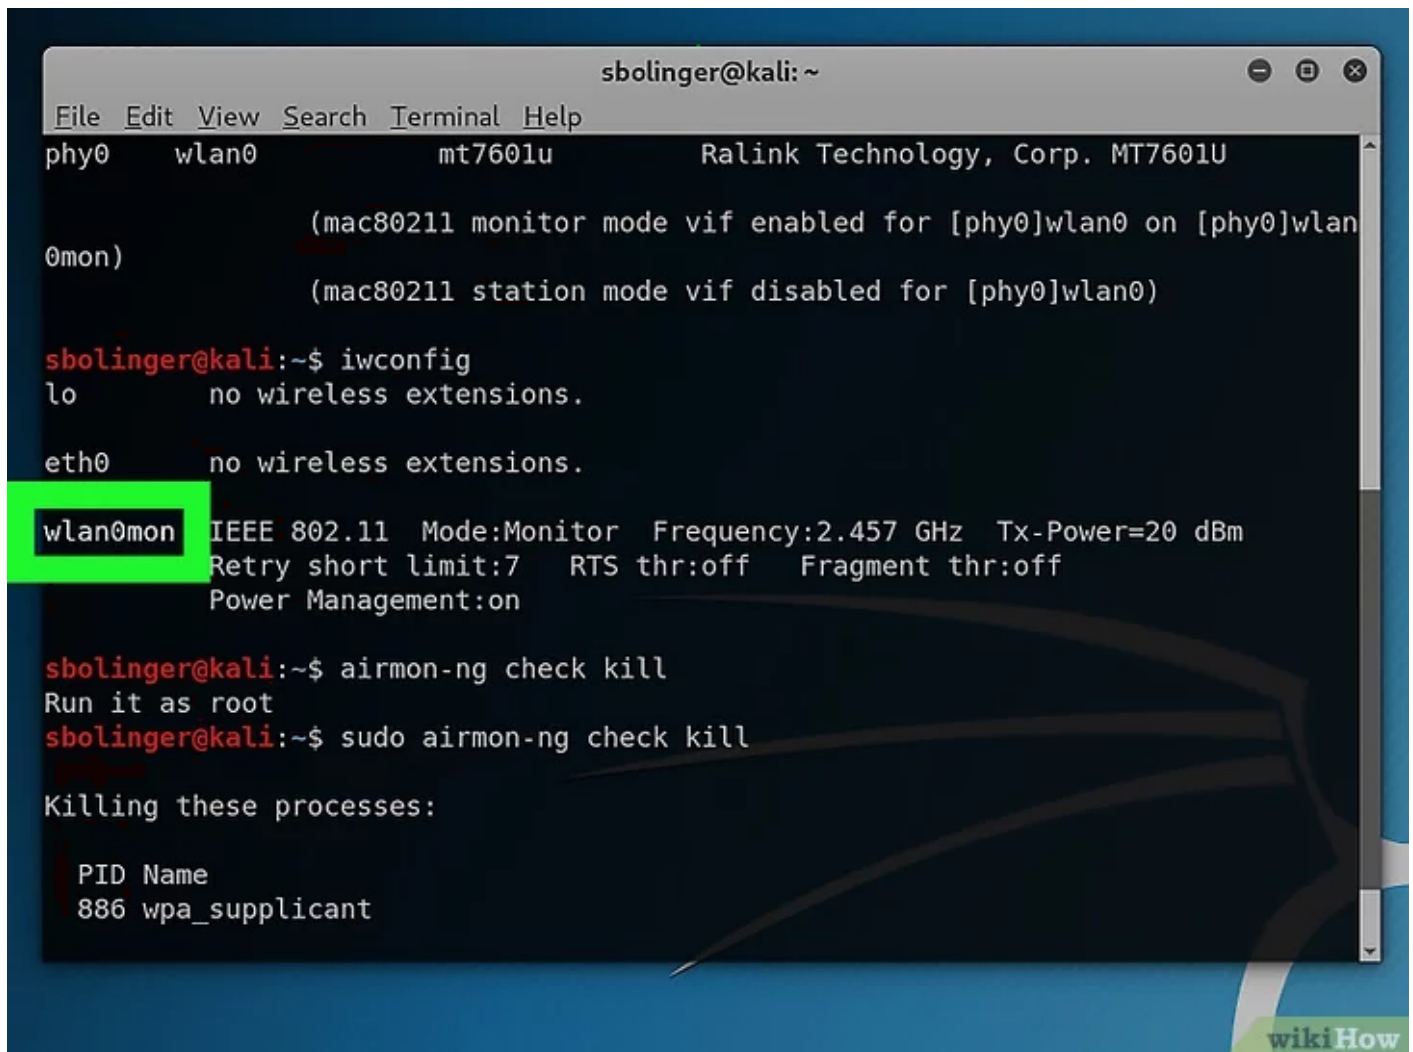

Enable Monitor Mode

```
sudo airmon-ng start wlan0
```

Kill all previous airmon processes

```
sudo airmon-ng check kill
```

Look out for the wireless monitor device

A terminal window titled 'sbolinger@kali: ~' with a menu bar (File, Edit, View, Search, Terminal, Help). The terminal shows the output of 'airmon-ng check kill', which indicates that the wireless interface 'wlan0' is in monitor mode. The user then runs 'iwconfig', showing that 'wlan0mon' is in IEEE 802.11 Mode:Monitor. Finally, the user runs 'airmon-ng check kill' again, and the terminal shows 'Killing these processes:' followed by a table with PID 886 and Name 'wpa_supplicant'.

```
sbolinger@kali: ~  
File Edit View Search Terminal Help  
phy0 wlan0 mt7601u Ralink Technology, Corp. MT7601U  
  
(mac80211 monitor mode vif enabled for [phy0]wlan0 on [phy0]wlan  
0mon)  
(mac80211 station mode vif disabled for [phy0]wlan0)  
  
sbolinger@kali:~$ iwconfig  
lo no wireless extensions.  
eth0 no wireless extensions.  
wlan0mon IEEE 802.11 Mode:Monitor Frequency:2.457 GHz Tx-Power=20 dBm  
Retry short limit:7 RTS thr:off Fragment thr:off  
Power Management:on  
  
sbolinger@kali:~$ airmon-ng check kill  
Run it as root  
sbolinger@kali:~$ sudo airmon-ng check kill  
  
Killing these processes:  
  
PID Name  
886 wpa_supplicant
```

Exec airodump-ng with the Monitor device

```
sudo airodump-ng wlan0mon
```

work in progress
