

Apt-usage

Install package

```
apt-get install <packagename>
```

search package

```
apt-cache search <packagename> or <packagedescription>
```

remove package

```
apt-get remove <packagename> to remove but letting configfiles untouched
```

```
apt-get purge <packagename> to remove with configfiles and without checking dependencies
```

```
apt-get autoremove remove unnecessary Packages
```

Update Package-Cache

```
apt-get update
```

Upgrade Packages

and (without installing additional) dependencies

```
apt-get upgrade
```

can lead to breaking. To install needed dependencies do:

```
apt-get install -f
```

Upgrade whole OS

```
apt-get dist-upgrade
```
