

How to set tx power to 30 on Alfa AWSU036H

- Three easy steps:

Three easy steps:

Here it goes

```
root@kali:~# ifconfig wlan1 down  
root@kali:~# iw reg set BO  
root@kali:~# iwconfig wlan1 txpower 30
```

This is what it looks before

```
wlan1 IEEE 802.11bg ESSID: off/any  
Mode:Managed Access Point: Not-Associated Tx-Power=20 dBm  
Retry long limit:7 RTS thr: off Fragment thr: off  
Encryption key: off  
Power Management: off
```

This is what it looks after

```
after :  
wlan1 IEEE 802.11bg ESSID: off/any  
Mode:Managed Access Point: Not-Associated Tx-Power=30 dBm  
Retry long limit:7 RTS thr: off Fragment thr: off  
Encryption key: off  
Power Management: off
```

mine is `wlan1` as internal is wlan0 yours may well be `wlan0` so just swap `wlan1` for `wlan0` in your own setup.
