

# Three easy steps:

## Here it goes

```
root@kali:~# ifconfig wlan1 down  
root@kali:~# iw reg set BO  
root@kali:~# iwconfig wlan1 txpower 30
```

## This is what it looks before

```
wlan1 IEEE 802.11bg ESSID: off/any  
Mode:Managed Access Point: Not-Associated Tx-Power=20 dBm  
Retry long limit:7 RTS thr: off Fragment thr: off  
Encryption key: off  
Power Management: off
```

## This is what it looks after

```
after :  
wlan1 IEEE 802.11bg ESSID: off/any  
Mode:Managed Access Point: Not-Associated Tx-Power=30 dBm  
Retry long limit:7 RTS thr: off Fragment thr: off  
Encryption key: off  
Power Management: off
```

---

mine is wlan1 as internal is wlan0 yours may well be wlan0 so just swap wlan1 for wlan0 in your own setup.

---
